

# XS665

## The Most Capacity in its Class

The XS665 is a powerful load bank offering a continuous load at various voltages specifically designed for data center commissioning. The digital meter synced with ComRent's patented remote technology allows you to view power, voltage, current and frequency. Test within minutes of connecting to a power source, providing options for blower and control power.

### PRODUCT ATTRIBUTES:

#### ONE PRODUCT, MANY APPLICATIONS

##### Control Voltage Adaptability

Save set up time by eliminating the need for external power with Control Voltage Adaptability from ComRent- The XS665 can operate in a broad voltage range and maintain its internal power for its fans and control circuits. Run with source voltage from 360VAC-504VAC without the need for external control power, saving additional costs on additional cable and generators.

#### TAKE THE HEAT... AND CONTROL IT

##### Adjustable Exhaust Louver

Reduce risk of heat damage with a three-position adjustable exhaust louver, aiming the heat to critical ducts to ensure your mechanical systems accurately respond as specified. Whether in a data center or outside, the XS665 safely controls the direction of heat away from critical infrastructure or to the desired target location.

#### READY FOR WHEREVER YOUR TEST TAKES YOU

##### Protective Nema 3R Enclosure

Available in a Nema 3R enclosure, the XS665 provides the flexibility to operate where the testing dictates. The weather-resistant design provides an option, ideal for temporary outdoor use.

#### OPTIMIZED POWER

##### Efficient Resistor Technology

Save shipping costs with an optimized, efficient resistor technology architecture that provides 665KW at 480VAC and 500KW at 415VAC. This astounding performance is packed into a 36-inch-wide chassis delivering capacity to where you couldn't previously.

# XS665

## The Most Capacity in its Class

### XS665 Specifications

XS665 Capabilities		
Voltage	Load Steps	Max Load
Load Step: 480VAC	6.7, 13.3, 13.3, 33.3, 66.6, 66.6, 199.7, 266.3	665
Load Step: 416VAC	5, 10, 10, 25, 50, 50, 150, 200	500

Specifications	
Fan Load	416V-480V 15A (Internal or External)
Connection Type	(3) 400A Camlock Panel Mounts Per Phase + 1 Grounds
dBA	83 dB @ 5FT
Discharge	Horizontal with adjustable pitch (45Deg to 90Deg)
CFM	12,000
Max inlet Temp	115DegF
Weather Capability	NEMA 3R All weather conditions
Weight (Shipping)	2000 LBS

Dimensions	
Length (Stand Alone)	68"
Width (Stand Alone)	35.25"
Height (Stand Alone)	62"
Weight (Stand Alone)	1400 LBS
Length (Shipping)	72"
Width (Shipping)	46"
Height (Shipping)	76.25"
Weight (Shipping)	2000 LBS

CR Remote System Capabilities	
Max Units in Network	50
Max Length Coms distance per connection	200FT (unamplified)

### TECHNOLOGY DRIVEN

#### Customizable Remote Technology

Benefit from additional savings on time and labor costs with ComRent's advanced remote capabilities. Control and monitor up to 50 load banks from a single remote. Remote capability allows the operator to activate fans and control loads equally on all units within the network. Create identifiers for each load bank connection point to simplify testing and improve communication.

The CR Remote utilizes the latest Surface Pro technology from Microsoft to provide a comprehensive and customizable solution to solve any customer need.

### About ComRent

ComRent International offers technology and energy customers the most comprehensive load bank and service solution to interconnect systems faster, stay on time and budget and reduce risk. Through ComRent's global locations, 3,210 unit fleet and over 90 miles of cable, customers receive load banks faster and can confidently rely on ComRent exceptional service and industry knowledge to do testing right the first time. Fortune 50 data centers, electrical utilities, solar and wind developers, and oil and gas companies rely on ComRent to fulfill their testing and commissioning requirements.
